

Profiles Project for Industrial Use

I. Background of the project

i. Market analysis

Aluminum is in line with the green building policy of "four saving and one environmental protection" (energy saving, land saving, water saving and material saving) in China. Following the extensive application of aluminum alloy building doors, windows and curtain walls, the aluminum formwork and automobile lightweight construction is forming a sweeping trend across the country, with obvious growth trend and broad market prospects.

2. Advantages of Xining

Industrial advantages: The project takes advantage of the production capacity of cast aluminum alloy and aluminum alloy intermediates that have been put into production in the aluminum-magnesium high-tech materials industrial park of Beichuan Industrial Park to realize the development of the downstream industry, improve the aluminum industry chain, and initially form the industrial aggregation degree, which can realize the effective guarantee of each production factor of the project.

Location advantage: Beichuan Industrial Park borders the northern part of Xining, connecting with Qinghai Bio-industry Park and Qinghai University Town, about 10 kilometers from Xining city center in the south and 40 kilometers from the Airport of Xining City. It is a strategic north exit for Xining and Haidong to connect the Hexi Corridor.

II. Supply of major raw materials

The major raw material aluminum can be supplied in the province and surrounding areas.

III. Scale and content of project construction

Making good use of aluminum profile processing enterprises and profile production capacity in Xining area, to produce by squeezing aluminum

alloy ingot, the project will build an annual production line of 400,000 tons profiles for industrial use, and build aluminum terminal product applications.

IV. Construction conditions

The construction site is located in Beichuan Industrial Park, Datong County. The park realizes convenient transportation, and is close to Xining, the provincial capital, and has obvious geographical advantages.

V. Progress of the project at the present stage

It is in the early stage of the project.

VI. Investment estimate, mode of cooperation and economic benefits

The total investment of the project is estimated to be 3.6 billion yuan, and the sales revenue will be 7.4 billion yuan after the completion of the project.

VII. Preferential policies

The project enjoys the preferential policies for the development of the western region and the preferential policies of the provincial government on strengthening the work of attracting investment.
